

**CHEMICALLY RESISTANT TWO-COMPONENT EPOXY RESIN COATING  
FOR WHG-APPLICATIONS**

**DESCRIPTION**

EP 282 WHG is a solvent-free and crack-bridging, 2-component epoxy resin flow-coat with very good chemical resistance. EP 282 WHG has been tested according to the Water Resources Act (WHG § 63) and is approved by the German Institute for Construction Technology (DIBt®). The coating is suitable for the application in collection trays and rooms such as production / handling areas and storage / handling areas which have to be equipped with coating systems tested in accordance with the WHG. The coating is suitable for fork-lift traffic. EP 282 WHG offer very good resistance to chemicals. The material is resistant to solvents, motor fuel, oil, mineral acids, alkalis, and salts according to the principles of the DIBt®. Please refer to the following exposure classifications and the test report. Due to special formula alteration in colour is possible during aging, don't change though. The effect of chemicals may cause discolouration but does not affect the properties of the material. EP 280 WHG offers a conductive adjustment which can be used when electrical conductivity is required. The product is especially suitable for areas where explosion protection is required. It is also suitable for production areas with demand to electrostatic control, like in chemical and pharmaceutical storage / handling areas, production / handling areas, and other manufacturing areas with high exposure to chemicals.

**RECOMMENDED FOR**

Typical areas of application are:

- ◆ Coating for collection-trays and -rooms with requirements according to the Water Resources Act and technical approval.
- ◆ Industrial flooring with vehicle traffic with requirements according to the Water Resources Act.
- ◆ Industrial flooring resistant to mechanical load and chemicals but without any requirements to electrical conductivity.

**ADVANTAGES**

- ◆ High chemically resistance
- ◆ Crack bridging (0.2 mm)
- ◆ Suitable for vehicle traffic
- ◆ Liquid tight
- ◆ Solvent-free
- ◆ Tested and approved for storage/handling facilities (LAU)
- ◆ Free of deleterious substances against varnish

**TECHNICAL CHARACTERISTICS**

Characteristic	Test Result	Test Method
Viscosity (Components A+B)	1,800 mPa s	EN ISO 3219 at 73.4 oF (23 oC)
Density (Components A+B)	1.42 kg/lit	EN ISO 2811-2 at 68 oF (20 oC)
Color	See relevant color chart	
Water absorption	< 0.2 weight %	DIN 53495
Tensile bending strength	> 45 N/mm <sup>2</sup>	DIN EN 196/1
Compressive strength	> 55 N/mm <sup>2</sup>	DIN EN 196/1
Shore hardness D	80	DIN 53505
Abrasion (Taber Abraser)	55 mg	ASTM D4060
Processing time at 50 oF (10 oC)	70 - 90 minutes	
Processing time at 68 oF (20 oC)	30 - 35 minutes	
Processing time at 86 oF (30 oC)	15 - 20 minutes	
Processing temperature	50 oF (10 oC) minimum room and floor temperature	
Curing time at 50 oF (10 oC)	24-36 hrs (Accessibility)	
Curing time at 68 oF (20 oC)	14-18 hrs (Accessibility)	
Curing time at 86 oF (30 oC)	10-14 hrs (Accessibility)	
Curing	2-3 days for mechanical load at 68 oF (20 oC) 7 days for chemical resistance at 68 °F (20 oC)	
Further coatings	After curing, but not longer than 48 hours at 68 oF (20 oC)	

All data are average values obtained under laboratory conditions. Impractical use, temperature, humidity and absorption of the substrate may influence the above given values

**DIRECTIONS FOR USE**

**Surface Preparation:** The substrate to be coated has to be levelled, dry, free of dust, has to have adequate tensile and compressive strength, and be free from weakly-bonded components or surfaces. Materials impairing adhesion, such as grease, oil and paint residues must be removed using suitable methods. The surface strength must then be a minimum of 1.5 N/mm<sup>2</sup>. For concrete, moisture content must not exceed 4.5 CM-%, remaining residual moisture. The possibility of moisture ingress from the rear must be permanently excluded. Please refer to the advice issued by the trade associations, e.g. the current edition of BEBworksheets KH-0/U and KH- 0/S, as well as the product information for the recommended base coat EP 55. The prepared surface has to be primed accurately, saturated, and free of pores. Estimating the substrate according to the necessary sealed state may be difficult, so a scratch coat is recommended for smoothing the surface. The conductive coating must be applied in an even thickness that is why it is mandatory to prepare the substrate thoroughly. If the substrate hasn't been sealed completely bubbles and pores may appear because of rising air. Conduct a trial if in doubt.

**Mixing:** EP 282 WHG will be supplied in the correctly measured mixing ratio. Component A has sufficient volume for the entire trading unit. Decant the hardener component B into the resin completely. Blend with a slow speed mixer (200 – 400 r/pm) for at least 2-3 minutes, for a homogeneous mixture, free of streaks. To avoid mixing errors, it is recommended to principally empty the resin/hardener-mixture into a clean container and mix briefly once again.

**Mixing ratios:** A:B = 4:1 parts by weight  
A:B = 100:42 parts by volume

**Processing/Handling:**

Build-up of coating according to the Water Resources Act implicates the following steps:

1. Prepare the substrate in accordance to "Substrate" above. In particular, surfaces must be prepared by shotblasting.
2. Apply a base coat using EP 55. Apply the freshly mixed material with a roller, coating knife, or trowel. Re-work with a roller for a smooth sealed layer. Consumption: 0.3 - 0.4 kg/m<sup>2</sup>. Thickness of layer: 0.3 - 0.4 mm. Scatter the fresh surface with quartz sand 0.3/0.8 mm. Consumption: 0.5 - 1.0 kg/m<sup>2</sup>.
3. For levelling uneven, rough surfaces a scratch-coat is required using EP 55 and Mischsand 2/1 (alternatively QUARTZ SAND MIX 0.10 – 0.45 MM, mixing ratio: 1:0.8 parts by weight). Apply a uniform coat with a smoothing trowel or coating knife after the base coat has cured, but not later than 48 hours. Consumption: 0.5 - 1.0 kg/m<sup>2</sup>. Mixture depending on roughness. Thickness of layers: 0.3 - 0.7 mm.
4. If required, concave or triangular coverings may now be inserted. Produce these, using EP 55 with Mischsand 1. If necessary add 1 - 2 % of Stellmittel 3 Super. Mixing ratio EP 55 : Mischsand 1 is 1 : 7 - 9 parts by weight.
5. Apply EP 282 WHG after 18 hours but not longer than 48 hours. Process the material immediately after mixing with a coating knife or notched trowel (Pajarito 48). Apply an even layer with approx. 1.6 mm thickness. Consumption: 2.4 - 2.6 kg/m<sup>2</sup>. The product is adjusted with an optimum of air venting. To upgrade the wettability of the substrate, optimize the flow-properties, and remove any air blows, it is recommended to re-work with a spiked roller, timedelayed after 10 - 15 minutes. Divide working areas before starting work. Always work "fresh-in-fresh" to avoid any shoulders.
6. For vertical surfaces mix EP 282 WHG coating material with 2 - 4 % Stellmittel 3 Super so that the material will stay on when applied. In advance prime the surface using EP 55 with 2 - 4 % Stellmittel 3 Super added. Floor- and air-temperature must not fall below 50 °F (10 °C) and/or humidity must not exceed 75 %. The difference in floor and room-temperature must be less than 37.4 °F (3 °C) so the curing will not be disturbed. If a dew- point situation occurs adhesion may malfunction, curing may be disturbed, and spotting may occur. Exposure to water should be avoided within the first 7 days. Curing time applies to 68 °F (20 °C). Lower temperature may increase, higher temperature may decrease the curing and processing time. If working conditions are not complied with, deviations in the described technical properties may occur in the end product

**Build-up of Coats:**

Test substrate and shot blast.

Base coat application with EP 55, consumption 0.3 - 0.4 kg/m<sup>2</sup>. Scatter with quartz sand, grain size 0.3/0.8 mm. Consumption: 1.0 kg/m<sup>2</sup>.

Optional: On rough surfaces, apply a scratch coat using EP 55 / Mischsand 2/1 (alternatively QUARTZ SAND MIX 0.10 – 0.45 MM), mixing ratio: 1:0.8 parts by weight. Consumption: approx. 1.0 kg/m<sup>2</sup> of the mixture.

Apply EP 282 WHG electrically conductive coating with a trowel (Pajarito 48), consumption approx. 2.5 kg/m<sup>2</sup>.

Vent with a spiked roller.

**CHEMICAL RESISTANCE**

By combining the chosen testing liquids, resistance to the following material groups have been proven by the testing principles of the DIBt®:

Test Group 1: Motor fuel, super, regular (according to DIN 51600 and DIN EN 228) with a max. of 5 % bio-alcohol (including 1a).

Test Group 2: Wide cut fuel.

Test Group 3: Fuel oil (according to DIN 51603-1), diesel fuel (according to DIN EN 590) (including 3a and 3b).

Test Group 4: All hydrocarbons (including 4a, 4b, 4c).

Test Group 5: Monovalent and polyvalent alcohol (including 5a, 5b).

Test Group 6: All halogen hydrocarbons except for fuel (including 6a, 6b).

Test Group 7: All organic esters and ketones (including 7a and 7b).

Test Group 8: Aqueous solutions of aliphatic aldehydes up to 40 % (including 8a).

Test Group 9: Aqueous solutions of organic acids (up to 10 %) and their salts (in aqueous solutions).

Test Group 10: Mineral acids up to 20 %, as well as acidic hydrolysing salts, excluding hydrofluoric acid, and acids with oxidising effect, and their salts (in aqueous solution).

Test Group 11: Inorganic alkalis and alkaline hydrolysing salts, except ammonia solutions and salts with oxidising effect.

Test Group 12: Aqueous solutions of inorganic, nonoxidising salts with a pH-value of 6 - 8.

Test Group 13: Amines and their salts in aqueous solutions.

Test Group 14: Aqueous solutions of organic tensides.

Test Group 15: Cyclic and acyclic esters.

Additionally the resistance to the following materials has also been tested:

Phosphoric acid 85 %, Sulphuric acid 90 %, Hydrochloric acid 37 %, Hydrofluoric acid 10 %, Acetic acid 20 %

Hydrogen peroxide 30 %, Sodium hypochlorite solution 12 - 14 % active chlorine, Concentrated ammonia 32 %

Chromic acid 50 %, Lactic acid 50 %

**Note:** Use the electrically conductive WHG-coating EP 280 WHG for all flammable or highly flammable fluids with requirements to protection against explosion.

The test periods to confirm the stage of exposure, according to the classification of the operation type, were determined as follows:

**LAU 1:** Minor exposure to the operation types – storage, filling, handling – test period 8 hours

**L 2:** Medium exposure to the operation type – storage – test period 72 hours

**LAU 2:** Medium exposure to the operation types – storage, filling, handling – test period 7 days

**L 3:** High exposure to the operation type – storage – test period 14 days

**LAU 3:** High exposure to the operation types – storage, filling, handling – test period 28 days

The higher rated exposure groups include the minor rated groups.

The exposure classification is attributed to the following test groups:

Exposure classification high / operation type LAU 3: Test groups 1,1a, 2, 3, 3a, 3b, 4, 4a, 4b, 4c, 5, 5a, 5b, 7, 7a, 7b, 8, 8a, 9, 10, 11, 12, 13, 14, additionally ammonia (32%), chromic acid (50 %), hydrofluoric acid (10 %), lactic acid (50 %), sodium hypochlorite solution (13 %), phosphoric acid (85 %), hydrochloric acid (37 %), sulphuric acid (90 %)

Exposure classification high / operation type L 3: Test groups 6b, 9a, additionally acetone, acetic acid (20 %), hydrogen peroxide (30 %)

Exposure classification medium / operation type LAU 2:

Test group 6

Exposure classification medium / operation type L 2: Test

groups 6a, 15

**COVERAGE** 2.4 – 2.6 kg/m<sup>2</sup>

**SPECIAL CONSIDERATIONS**

To remove fresh contamination and to clean tools, use thinners VR 24 or VR 33 immediately. Hardened material can only be removed mechanically. Please note the special cleansing recommendations for electrically conductive coatings.

The product is subject to the hazardous material-, operational safety-, and transport-regulations for hazardous goods. Refer to the DIN-Safety Data Sheet and the information on the labelled containers!

GISCODE: RE 1

Indication of VOC-Content: (EG-Regulation 2004/42), Maximum Permissible Value 500 g/l (2010,II,j/lb): Ready-for-use product contains < 500 g/l VOC.

Contact PENETRON ROMANIA for additional information, regarding your project.

#### **PACKAGING**

EP 282 WHG is available in 8+2 kg and 24+6 kg. containers.

#### **STORAGE / SHELF LIFE**

Store in dry and frost-free conditions. Ideal storage temperature is between 50 - 68 °F (10 - 20 °C). Bring to a suitable working temperature before application. Tightly reseal opened containers and use the content as soon as possible. When properly stored in a dry place in unopened and undamaged original packaging, shelf life is 12 months.

#### **SAFE HANDLING INFORMATION**

Avoid skin and eye contact. If contact is made, flush areas with lots of water and seek medical advice. Protective gloves, mask and goggles should be worn. For further information please refer to Safety Data Sheet. PENETRON ROMANIA has recently updated Safety Data Sheet on the safe use of PENETRON® products. Each Safety Data Sheet contains health and safety information for the protection of your employees and your customers.

KEEP OUT OF REACH OF CHILDREN.

#### **CERTIFICATION**

Classification of the fire behaviour according DIN EN 13501-01:2010-01: Bfl-s1.

Slip resistant scattered coating grade R11/V4 according to DIN 51130 and BGR 181.

Slip resistance grade R9 and R10, according to DIN 51130 and BGR 181.

WHG-coating with DIBt® site supervision accreditation. Please ask for the tested system structure for use product contains < 500 g/l VOC.

Contact PENETRON ROMANIA for additional information regarding your project.

#### **WARRANTY – DISCLAIMER**

**BEST IMPORT PRODUCTS PENETRON** warrants that the products manufactured by it shall be free from material defects and will conform to formulation standards and contain all components in their proper proportion. Should any of the products be proven defective, the liability to BEST IMPORT PRODUCTS PENETRON shall be limited to replacement of the material proven to be defective, and BEST IMPORT PRODUCTS PENETRON shall in no case be liable otherwise or for incidental or consequential damage.

**BEST IMPORT PRODUCTS PENETRON MAKES NO WARRANTY AS TO MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE AND THIS WARRANTY IS IN LIEU OF ALL OTHER WARRANTIES EXPRESSED OR IMPLIED. User shall determine the suitability of the product for its intended use and assume all risks and liability in connection therewith.**

BEST IMPORT PRODUCTS PENETRON may particularly differentiate its versions of the product's data sheet compared with those of PENETRON INTERNATIONAL LTD or respective PENETRON companies worldwide. These changes are due to text formatting, different application weathering and procedures or different product names and aim at the optimal consumer information.
